Project Development Phase
Performance Test

Date	27 October 2026
Team ID	Individual
Project Name	EV Market Performance & Sustainability Analytics
Maximum Marks	

Project Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The EV market CSV/Excel dataset is connected in Tableau Desktop. The dashboard screenshots display sales, model year, category, country, battery, price, range, charging/efficiency and CO_2 measures. Exact record count and file size were not provided; obtain them from Data Source/file properties.
2.	Data Preprocessing	Check field data types, null values, duplicates, category/country/battery naming consistency, and units. Confirm sales aggregation and validate customer-rating and charging/efficiency scales. Actual null and duplicate counts must be filled after checking the source.
3.	Utilization of Filters	The dashboard screenshot shows Category and Model Year filters. Test each filter, confirm the intended worksheets respond, and verify totals update correctly. Note observed response times only after measuring them.
4.	Calculation fields Used	KPI examples shown: Total Sales ≈ 1.55B; Average Vehicle Price ≈ $64,921; Average Driving Range ≈ 324.54 km; Annual CO_2 Saved ≈ 737.93K tonnes. Example calculations, if needed: SUM([Annual Sales Units]), AVG([Vehicle Price]), AVG([Driving Range]). Verify actual field names and aggregation.
5.	Dashboard design	Main dashboard: 4 KPI cards + 4 charts (sales trend, sales by country, vehicle-category donut, battery-technology donut). Second dashboard: 4 visualisations (manufacturer performance, range distribution, country/category heatmap, charging-efficiency scatter plot). Total 8 charts plus 4 KPI cards across the two dashboards. The workbook may contain additional worksheets not placed on these dashboards.
6.	Story Design	Suggested Tableau Story: 5 story points—(1) Executive KPI overview, (2) sales trend and manufacturing-country comparison, (3) vehicle-category mix and range, (4) battery technology mix, (5) manufacturer performance, heatmap and charging/efficiency. This is a proposed sequence; report the actual story-point count after creating it in Tableau.
