Dashboard Design

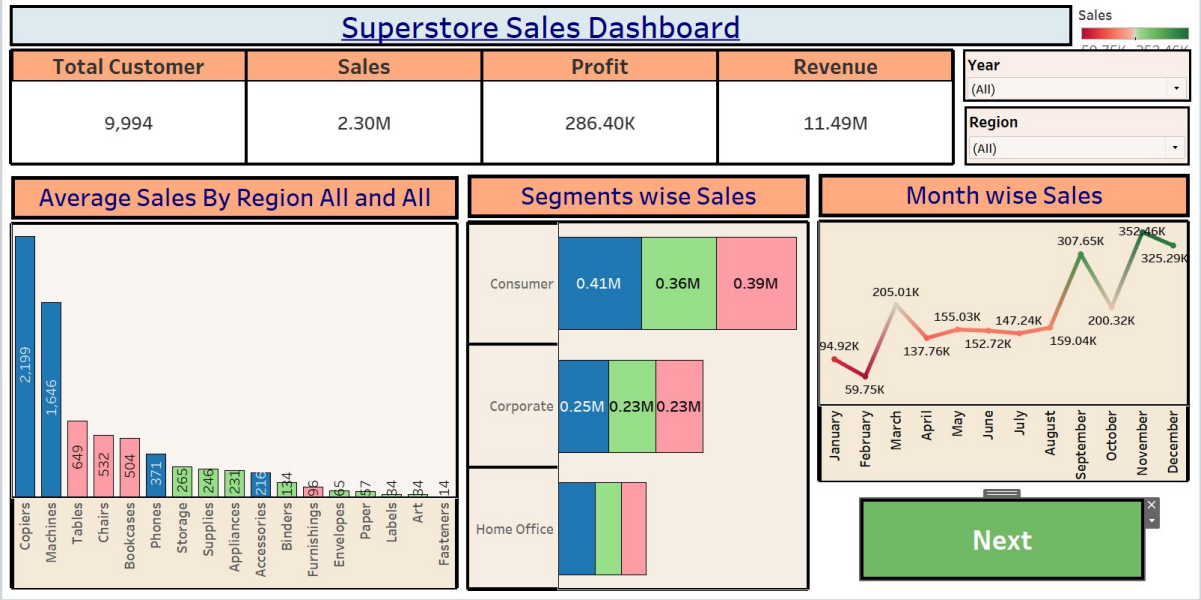

Date	27 October 2026
Team ID	Individual
Project Name	EV Market Performance & Sustainability Analytics
Maximum Marks	5 Marks

The EV dashboard is designed to make market performance and sustainability measures easy to compare. The main dashboard places KPI cards first, followed by annual sales trends and manufacturing-country sales, with vehicle-category and battery-technology donut charts below. A second dashboard contains manufacturer performance, range distribution, a country/category heatmap, and a charging-efficiency scatter plot.

Activity 1: Interactive and visually appealing dashboards

The Tableau dashboard combines clear chart selection, consistent category colours, KPI summaries, and filters where configured. The following design principles describe the current workbook and items to validate.

- Clear and Intuitive Layout: KPI cards appear at the top, with related charts grouped beneath descriptive headings.
- Use Appropriate Visualisations: Line chart for trends; horizontal bars for country comparisons; donut charts for category and battery shares; heatmap for country/category comparisons; scatter plot for charging and efficiency; range distribution chart for category variation.
- Colour and Theming: Use a consistent category palette and restrained blue/neutral styling. Keep category colours consistent across worksheets where possible.
- Interactive Filters and Slicers: The screenshots show Category and Model Year filters. Test which worksheets each filter controls before presenting.
- Drill-Down Capabilities: Use tooltips and worksheet navigation to inspect values. Mention dashboard filter actions only if they are configured and tested.
- Responsive Design: Use Tableau dashboard sizing and Device Preview to check desktop and phone layouts. Mobile responsiveness must be tested rather than assumed.
- Custom Visuals and Icons: Use concise KPI labels, clear units, readable titles, and sufficient contrast.
- Use of Infographics: KPI cards summarize sales, price, range and CO_2 savings; donut charts summarize sales mix.

Note: Highlight the major outcomes in form of bullet points

Sample:

Major outcomes from the EV Market Performance & Sustainability Analytics dashboard:

- Total Market KPI Overview: The dashboard displays approximately 1.55B sales units, an average vehicle price of $64,921, average driving range of 324.54 km, and annual CO_2 savings of 737.93K tonnes.
- Battery Technology Mix: NMC (about 33.80%) and LFP (about 31.99%) have the largest displayed sales shares in the battery donut chart.
- Annual Sales Trends: The line chart compares sales across model years and vehicle categories, helping analysts identify patterns that warrant further investigation.
- Manufacturing Country Comparison: The horizontal bar chart shows India and China among the leading displayed countries by recorded sales.
- Vehicle Category Distribution: The donut chart compares category contributions, while the range distribution and heatmap provide additional segment-level context.

Activity 2

Activity 2: Publish Dashboard on Tableau Public and paste the public link below:

Example

Validation note: The manufacturer-rating and charging/efficiency axes in the supplied screenshots appear unusually scaled. Check source fields, aggregation, and units before presenting detailed performance conclusions.
