Story

Date	27 October 2026
Team ID	Individual
Project Name	EV Market Performance & Sustainability Analytics
Maximum Marks	5 Marks

A Tableau Story presents the EV market findings in a logical sequence so an audience can move from the overall market summary to sales patterns, category mix, battery technologies, and sustainability-related indicators.

For this project, story points can use the existing Tableau dashboards and worksheets. Each point should have a clear title and a short explanation of what the view shows. The story should guide users from broad KPIs to more detailed comparisons without implying causation from descriptive charts.

Observations from the EV Tableau dashboard:

- Overall Market Snapshot: The dashboard displays approximately 1.55B total sales units, $64,921 average vehicle price, 324.54 km average driving range, and 737.93K tonnes annual CO_2 savings.
- Sales Trends: The line chart compares annual sales by model year and vehicle category, helping identify segments with different historical patterns.
- Vehicle Category Mix: The category donut chart compares recorded sales contributions across vehicle segments, including SUVs, hatchbacks, scooters and three-wheelers.
- Battery Technology Mix: The screenshot shows NMC at approximately 33.80% and LFP at 31.99% of displayed battery sales, followed by NCA and Sodium-Ion.

Activity 2:

Activity 2: Publish Story on Tableau Public and paste the public link below:

Suggested Tableau Story Sequence

Story Point 1 — Executive Overview: Show the four KPI cards: total sales, average vehicle price, average driving range and annual CO_2 saved. Explain that these values summarize the supplied dataset.

Story Point 2 — Sales and Geography: Show the sales trend by model year and the horizontal bar chart by manufacturing country. Describe historical differences without treating them as forecasts.

Story Point 3 — Vehicle Segment Mix: Show the vehicle-category donut and range distribution. Explain how the segment mix and range spread answer different business questions.

Story Point 4 — Battery Technology: Show the battery-technology donut. Mention the displayed NMC and LFP shares and that they describe this dataset, not necessarily the entire global EV market.

Story Point 5 — Performance and Sustainability: Show the manufacturer bubble chart, country/category heatmap and charging-efficiency scatter plot. State that customer-rating and charging/efficiency scales should be validated before detailed conclusions.

Publishing link: intentionally left blank until the Tableau Story is published and a real public URL is available.
